THE MACROCOSMOS AND OUR PLANET EARTH.

We find ourselves embedded in the planet Earth that is floating in space/time and wrapped in the gravitational force of the Sun travels it with an average speed of 29.8 km / s , that is 107,380 kilometers per hour. A tremendous speed we do not perceive. In turn, the Sun moves within the galaxy at an average rate of 220 km / s , converted at kilometers per hour, there are 792,000! We move fast in our human velocity parameters; however, our range of sensory perception prevents us from being aware of it.

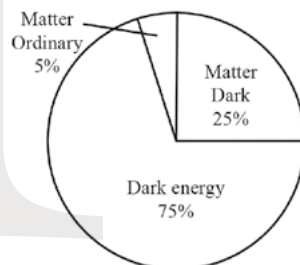

If we draw this motion, we will realize that the planet does not revolve around the Sun describing an elliptical orbit. This conception that accompanies us from small is erroneous. Why? Because the Sun is also moving over the Galaxy, which leaves us with a pattern of spiral motion where the planet Earth never returns to touch the same physical place. A terrestrial year or a return from Earth to the Sun is never a return. It is a transfer from a point to another

The helical future of the Solar System

Indissoluble unity: Matter / Space / Time

Energy Distribution / Matter

point in space, a completely different place. If we visualize this idea, we will project it as a spiral spin, a caduceus of the planets making a vortex in space.

This allows us to understand three fundamental concepts: matter, space, time. The three concepts are inseparable. They are intimately imbricated and depend on each other. We can metaphorize matter as the planet Earth, that physical point that rotates in space. Space is the physical place in which matter rotates. It is a matter of lower density. It is not a place devoid of matter. It is less dense matter. And time is the turn. Time is the act of rotating. It is the transformation of matter as it advances in space. In such a way that these three concepts are not abstract. They are always physical material.

It must be introjected that everything in the Universe is made of the same substance but with different levels of density. Imagine a sea made with different viscosities but the whole sea is composed of water. In real physics that sea that substance is made of 70% dark energy, 26% dark matter and 4% of matter like with all the stars, planets and ourselves.

Thus the planet “matter” rotates in space “less dense matter” and creates time “transformed matter.” Time can be seen physically in the matter. It is not an abstract concept. It is a physical fact. The planet Earth, when spins, produces an electromagnetic field of toroidal form (like an apple) that protects the atmosphere and with it the organic life, that fragile layer where we live.

It is as thin in proportion as the thickness of an apple peel is in proportion to the whole apple. On this layer, we live the vast majority of known living beings. The magnetosphere collides with the solar wind and generates a sphere of plasma in the Van Allen belts that can be seen as the northern lights in the northern hemisphere and the southern auroras in the south.

In the magnetosphere, we find the outer and inner Van Allen belts as well as the orbits of GPS satellites or geo-location satellites. There we find an immense amount of satellites that weave a network of artificial frequencies. On the surface of the planet Earth, we see different grids that have been discovered by scientists observers of patterns and constants. Looking for an answer to explain the reason for the location of gigantic monuments, temples, or areas of space/time distortion have ventured into mapping possible geometric routes that weave the terrestrial mosaic.
