THE MESOCOSMOS AND BIOLOGICAL ARCHITECTURE.

2.2- The isolated vision and the neoliberal model

The isolated vision that currently dominates the scientific paradigm can be characterized by these considerations. The universe and all the material objects within it behave like a machine; the analysis of this machine is done through successive reductionism of all its components in smaller and smaller parts; there is no underlying organizational structure, therefore, there is no need to consider one within the fundamental model of science; the process of organization within the universe is only through random events and interactions; there is no innate intelligence or life within inorganic matter, essentially making a dead universe; the direction of evolutionary systems is always towards a decreasing order and toward dissolution; the objects are separated by empty spaces and therefore inherently disconnected; the vacuum of space is devoid of energy.

Electromagnetic toroid of the heart

Fundamentally, this isolated view represents a random universe with no underlying organizational pattern that is inevitably directed towards disorder and is like a dead machine that can be studied by dismembering it.

That has been the dominant scientific paradigm in past centuries and thus the true nature of reality is perceived. The constructions and the “modern” designs follow this line of thought. The values of the isolated paradigm lead us to live the behavior we observe in the current world. Neoliberalism in one of its highest expressions.
