MICROCOSM AND FRACTAL SCIENCE

***3.14- The dynamics of the
Universe is a cube / octahedron
compressed in an icosahedron /
dodecahedron***

The structure of the Universe is a fractal matrix originated from a cuboctahedron, however, living in a Universe of that nature would be a dead universe, it is necessary, a compression, a geometric dance where the icosahedron / dodecahedral matrix arises. This arises when the cuboctahedron is compressed and we obtain an icosahedron. The cuboctahedron gives us a rigidity in the system while the icosahedron / dodecahedron, by containing the golden ratio, allows the toroids and eddies necessary for intercommunication of the system to arise. This is how the Flower of Life coexists, with its static hexagonal patterns such as the Pentaflor, with its pentagonal patterns that allow the distribution of waves.
