COMMUNITY MANDALAS: INTERNATIONAL FRACTAL ECOVILLAS

7.3- Geometric organization of management and use of power

We can think of the five Platonic solids and the five forms of community organization with respect to their axis of attention, but for a community to prosper, we need, as we have said before, a point of implosion / explosion. A zero point. When this zero point is a person and dies, normally, the community dissolves. When they revolve around the code of values, they have the opportunity to transcend in time. Something is true, the social dynamics that are generated in a community are much faster to question, change or freeze the universe of inner meaning in each person. Groups of multiple mirrors are generated, where the healthy psychological aspects of the members are mirrored with the same rigor as the sick psychological aspects.

This triggers an endless number of well-directed emotions

Circular community

- *Communication by consensus*
- *All members at the same distance from the center*
- *It resolves around a point of gravity*

that generate a positive individual and collective change, but misdirected generates greater chaos, confusion and internal and external imbalance.

Think of geometric scenarios of geometrized social configuration. A circle / sphere with an axis at the center would be a community where there is a leader or a leading principle and all members have the same distance, the same right, responsibilities and obligations with respect to that center. It would be a little permeable community, with clearly defined rules and well-structured systems. In this system, the communication that would be sought is consensus. And consensus, unlike agreements by majority vote, is produced by consent among all the members of a group, that is, all the voices have to be represented in the final decision. Dynamics of communication very complex slow, enriching and sometimes inappropriate for making effective technical decisions.

Another scenario of social organization is a spiral, where all the members of the group tend to go towards the center or towards the periphery, an open organizational system that accepts faster and more fluid feedback from the outside to the inside. An exchange of human, economic, material, spiritual or technological resources with a greater transfer factor. The system is one of the most effective forms of decision-making and government, and it is the sociocracy. This consists of the behavior of the group as a living organism, of self-organizing and self-correcting. Its foundation is based on systemic theories. The most important objective is to develop the co-participation and co-responsibility of the actors, empowering collective intelligence at the service of the organization's success.
